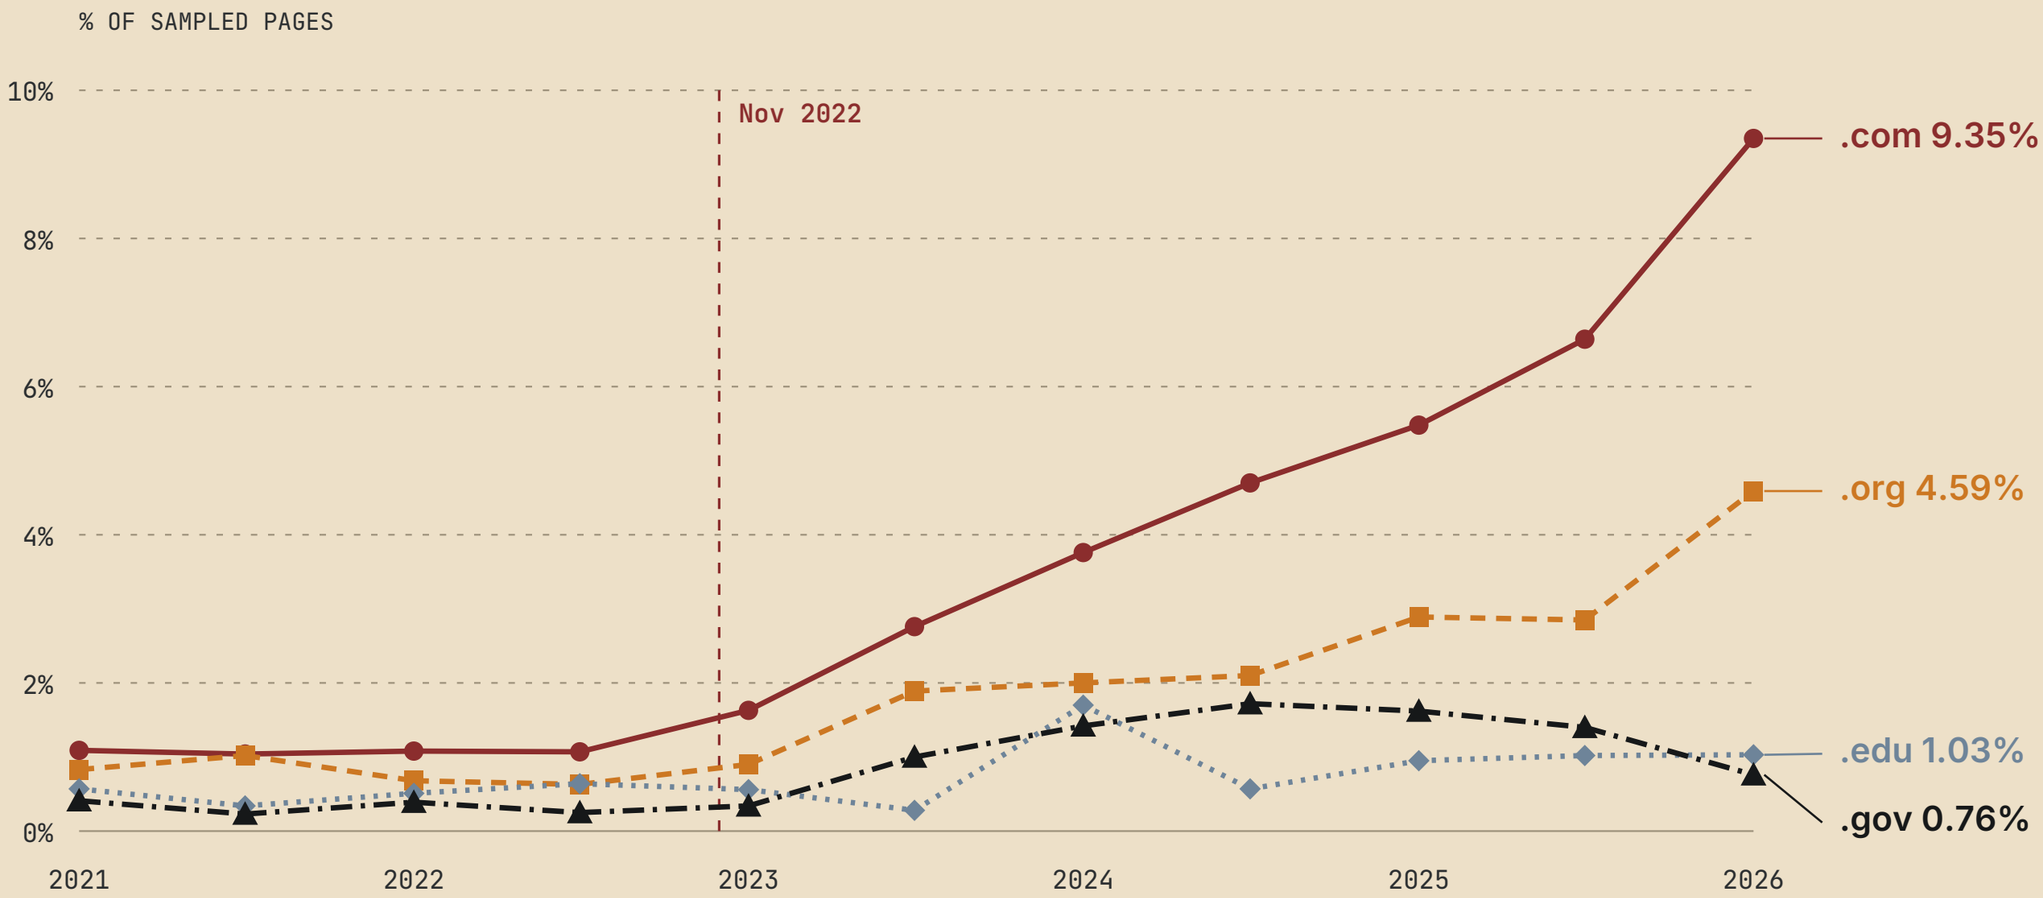
SHADOW 06 / FIGURE 1

Signs of AI authorship by web domain, 2021–2026



CAVEAT

Pew's detector flags pages written or substantially edited with AI, and misclassifies individual pages in both directions. Points are six-month averages; Pew reports a higher false-positive rate on pre-AI pages.

Before late 2022, every domain sat near 1%. By January 2026, almost one in ten .com pages showed signs of AI authorship — ten times the rate on .edu and .gov.
