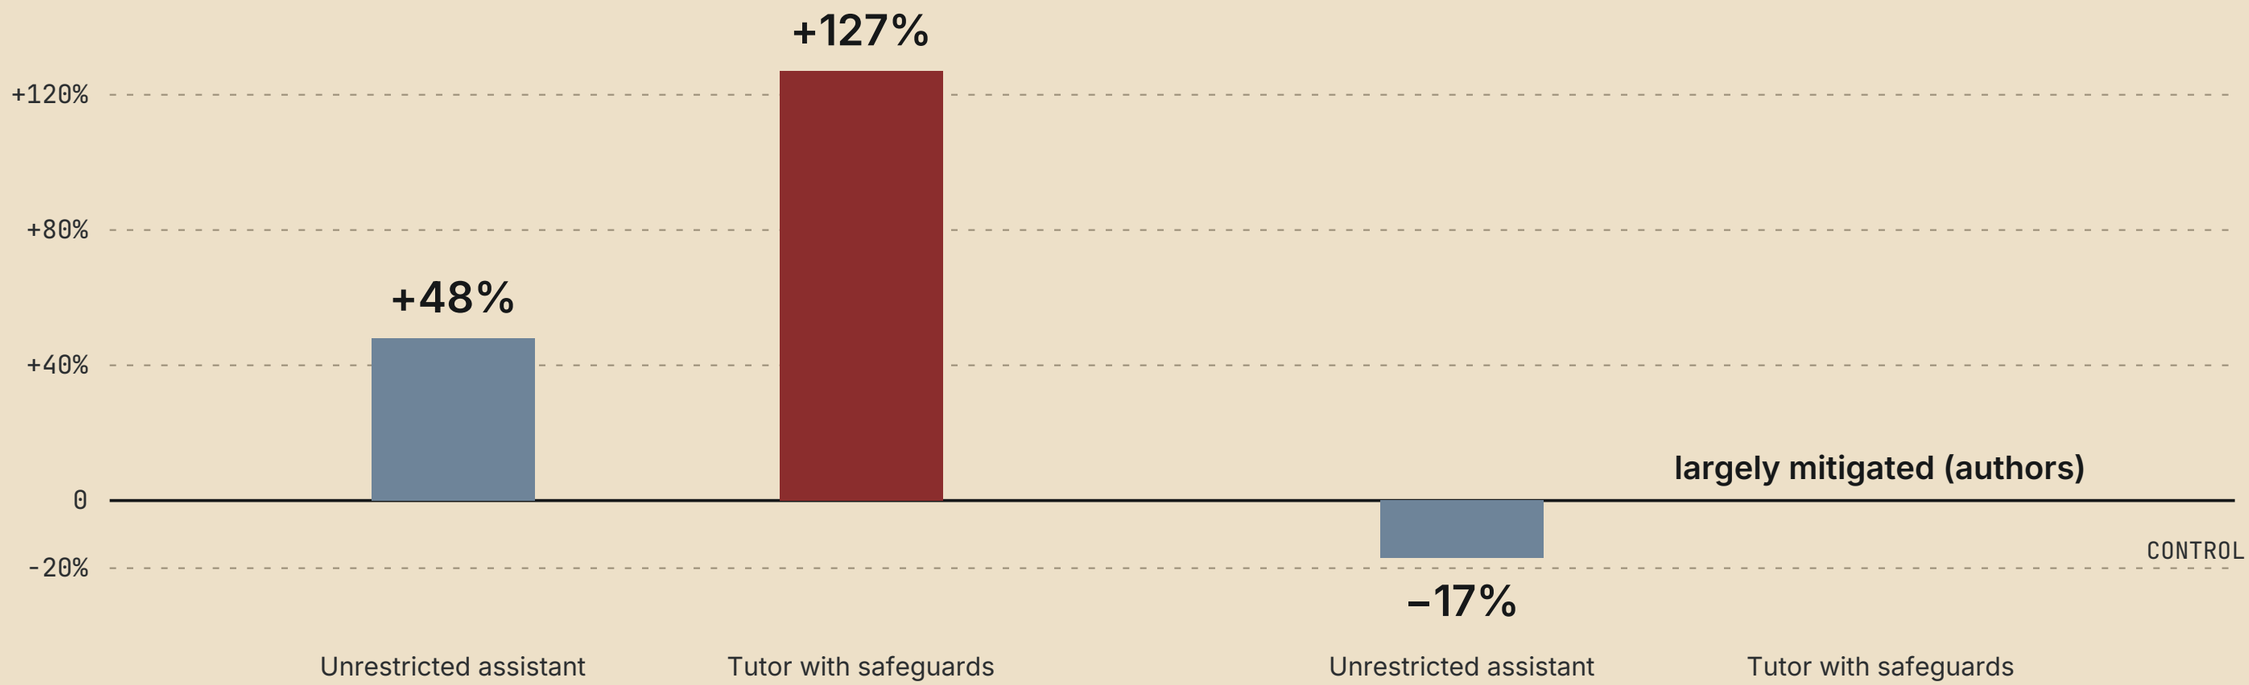
SHADOW 06 / FIGURE 9

Practice versus exam



Unrestricted access raised practice scores by 48% and was followed by exam scores 17% below the control group once access was removed. For a tutor designed not to hand out answers, the authors report the loss was largely mitigated.

A separate randomised study (BJET, 2025; 117 students) found the strongest essays in the AI-assisted group and did not detect a statistically significant difference in knowledge gain or transfer.
