Counting, screening, judging

ACTOR	WHAT IS CLASSIFIED	INSTRUMENT	USE	HUMAN STEP	OUTCOME	IDS
Pew Research Center	web pages (sample)	open-weight detector (Open Pangram)	measure (aggregate)	method published	population estimate only	A01-A05
NeurIPS 2026 Position Paper Track	submissions	Pangram detector	screen	reviewed by PPT team; evidence route for 123	178 desk-rejected; 123 asked for evidence	F30-F33
arXiv	submissions	moderators	screen	volunteer moderators	rate limit; one-year ban for incontrovertible unchecked AI content	F01;F07
University of Waterloo	student work	Turnitin AI detection	discontinued	institution review	feature switched off Sep 2025	E14
Curtin University	student work	Turnitin AI detection	discontinued	institution review	feature switched off Jan 2026	E15
Turnitin (vendor guidance)	student work	own AI writing detector	screen	human judgement required	not sole basis for adverse action	E13
New York Supreme Court (Newby v Adelphi)	one student's essay	court review of one evidentiary record and disciplinary process	sanction reviewed	court	determination annulled on case-specific evidentiary and procedural grounds; no general finding on detectors	E20

CAPTION

The same kind of classifier is used to estimate prevalence, to screen submissions, and — less and less — to judge individuals.

NOTE

Aggregate estimation and individual adjudication carry different error requirements (ICML 2024, Liang et al.).
