Counting, screening, judging

ACTOR	WHAT IS CLASSIFIED	INSTRUMENT	USE	HUMAN STEP	OUTCOME
Pew Research Center	web pages (sample)	open-weight detector	measure (aggregate)	method and threshold published	population estimate; individual pages misclassified both ways
arXiv	submissions	moderation	screen	staff and moderators	limit of two new submissions per month; one-year ban for incontrovertible unchecked AI content
NeurIPS 2026 Position Paper Track	submissions	commercial AI-text detector	screen	decision routes varied by score band and stated conditions; additional considerations not listed for every group	178 desk-rejected (no appeal under standard circumstances); 123 offered an evidence route (version history)
Turnitin (vendor guidance)	student work	own AI-writing detector	guidance on use	human judgement required	result "should not be used as the sole basis for adverse actions"
University of Waterloo	student work	Turnitin AI detection	discontinued	—	feature switched off, Sep 2025
Curtin University	student work	Turnitin AI detection	discontinued	—	feature disabled from 1 Jan 2026
University of the Free State	student work	Turnitin AI detection	discontinued	—	discontinued from 1 Jul 2026
New York Supreme Court, Nassau County	one disciplinary determination	court review of the evidentiary record and process	sanction reviewed	court	determination annulled on case-specific evidentiary and procedural grounds; no general finding on detectors

CAPTION

The same kind of classifier is used to estimate prevalence, to screen submissions and, in some cases, to inform decisions about individuals.

NOTE

Aggregate estimation and individual adjudication carry different error requirements (ICML 2024, Liang et al.).
